

RESUME

Mr. Yogesh Dattatray Morey

Snowflake Data Engineer | AWS Certified | SQL | DBT Cloud

Address: Nagpur, Maharashtra - 440015, MH, India

E-mail: ymorey15@gmail.com & Mob: +91 7756925797

Summary

Snowflake Data Engineer with 3.6+ years of experience designing and building scalable cloud data solutions using Snowflake, SQL, DBT, and AWS. Experienced in developing ETL/ELT pipelines, data modeling, and performance optimization for large-scale enterprise data platforms. Skilled in implementing Snowpipe, Streams & Tasks, and automated data workflows to support analytics and reporting. AWS Certified professional with strong expertise in cloud data warehousing and modern data stack.

Core Competencies & Technical Skills

Snowflake Data Warehousing

- Snowflake Architecture (Virtual Warehouses, Time Travel, Zero-Copy Cloning)
- Tables, Views, Materialized Views
- Streams & Tasks
- Performance Monitoring and Query Optimization

Data Loading & Integration

- Bulk Data Loading, Snowpipe, Staged Files
- Data Transformation During Load
- Data Unloading to AWS S3
- Data Ingestion, Data Migration, Data Conversion

Data Transformation

- DBT Cloud
- DBT Model Development (Staging, Intermediate, Marts)
- sources.yml, dbt_project.yml configuration
- Incremental Models, Testing and Documentation

Cloud Platforms

- AWS (S3, EC2, IAM, VPC, CloudWatch)

Databases

- SQL Server
- MySQL
- Snowflake

Programming & Query Languages

- Advanced SQL
- SnowSQL

Data Modeling

- Star Schema
- Snowflake Schema

Tools & Collaboration

- GitHub
 - ServiceNow
 - DBT Cloud
-

Certifications

- AWS Certified Solutions Architect – Associate
-

Professional Experience

Snowflake Developer | Tata Consultancy Services

Feb 2022 – Aug 2025

Projects:

Honeywell (USA) — Aug 2024 – Aug 2025

Webster Bank (USA) — Feb 2022 – Jul 2024

Responsibilities

- Designed and implemented cloud-based data pipelines using Snowflake and AWS to process large-scale banking transaction data.
- Developed automated ELT pipelines using Snowpipe, Streams, and Tasks for efficient and near real-time data ingestion.
- Built modular DBT models (staging, intermediate, and marts) to transform raw data into analytics-ready datasets.
- Optimized Snowflake query performance through warehouse tuning, SQL query optimization, and efficient table design.
- Created and managed Snowflake objects including tables, views, materialized views, and zero-copy cloning.
- Implemented data modeling techniques such as Star Schema and Snowflake Schema for reporting and analytics solutions.
- Integrated Snowflake with AWS S3 for secure data ingestion and data unloading processes.
- Collaborated with cross-functional teams in Agile environments using Jira to deliver data engineering solutions.

Key Achievements

- Automated end-to-end data ingestion pipelines using Snowflake Streams and Tasks, reducing manual operations by 80% and improving data processing efficiency.
- Improved Snowflake query performance by optimizing SQL queries and warehouse configurations, resulting in faster data processing and reporting.

- Enabled near real-time analytics by implementing automated ingestion pipelines using Snowpipe.

Education

Bachelor of Engineering (Computer Science)

Sant Gadge Baba Amravati University

Amravati, Maharashtra, India

Languages

English, Hindi, Marathi
